FITLER MBA · SESSION 09 · MARKETING & GO-TO-MARKET

# First GTM Plan Canvas

Business / team _____

Date _____ Review date _____

One plan. Two jobs: build preference and enable purchase. Mark each entry F observed fact A assumption Q question. Unknowns are not zeros.

## 1 CUSTOMER CHANGE

What changes for the customer? What observable action would show it?

## 2 FIRST BUYER + MOMENT

Who chooses, pays and uses? When? Who is not first? Name the evidence needed.

## 3 ALTERNATIVE + DIFFERENCE

What would they do instead? What difference matters? What should they remember us for?

## 4 OFFER + PRICE + PROOF

What can they buy, at what price? Why believe it? Does the offer prove the promise?

## 5 REACH + PURCHASE

One first channel. Trace the steps to a paid order. Who sells and who fulfills?

## 6 DELIVERY + RETURN + REFERRAL

What must delivery prove? What follow-up is welcome? Why return or recommend?

## 7 ECONOMICS + CAPACITY

Revenue minus serving cost minus winning cost. What can we actually deliver?

## 8 TEST + OWNER + DECISION

Evidence, risky assumption, test, owner, cash/time cap, deadline, threshold, alternative.

**Plan check.** Does the offer fit the buyer and prove the brand promise? Does the route reach them at the buying moment? Can we deliver and afford it? Could the test prove us wrong?

**Godin's quality check.** Truth → evidence · Assertions → testable beliefs · Alternatives → fallback · People → owners · Money → resources. An operational synthesis of The Marketing Seminar, not an official Godin framework.

FITLER MBA · SESSION 09 · COMPLETED EXAMPLE

# Beginner Coffee Tasting · A Local Roaster

**FICTIONAL** TEACHING EXAMPLE

No actual company data, demand evidence or Éclat numbers.

A connected hypothesis, not a proven business, and not the answer to the Éclat workshop. Each entry is tagged the way yours should be.

## 1
### CUSTOMER CHANGE

Coffee-curious locals book and attend a paid discovery session, then leave able to name flavors they enjoy. F Booking and attendance are observable. Q Whether they got the benefit still needs checking.

## 2
### FIRST BUYER + MOMENT

A local planning a weekend outing for two. One person may choose and pay; both attend. **Not first:** professional baristas or anyone seeking the cheapest coffee. Q "Tell me about your last outing. What did you do, pay and worry about?"

## 3
### ALTERNATIVE + DIFFERENCE

**Alternative:** a familiar café or another weekend activity. **Remembered for:** discovery without intimidation. **Promise:** "Discover what you like in coffee. No expertise required." A Which buyer cares is still an assumption.

## 4
### OFFER + PRICE + PROOF

**$80 per pair.** 60 minutes, three guided tastings, a take-home preference card. **Proof:** a truthful beginner-friendly agenda and host introduction. Cancellation terms stated plainly. A Package and price. Test willingness to pay.

## 5
### REACH + PURCHASE

Local newsletter placement → one beginner-tasting page → choose a session → pay $80 → confirmation → attend. The roaster sells and fulfills. One channel, so the learning is readable. A Newsletter access and audience response are hypotheses, not agreements.

## 6
### DELIVERY + RETURN + REFERRAL

Run the session at the promised time and scope. Each pair leaves with a preference card and a story worth sharing. Separate opt-in for a different future session. A Do not assume repeat buying or referrals. Two attendees are not two customers.

## 7
### ECONOMICS + CAPACITY

At 10 new paid bookings: **$80 − $35 serving − ($200 ÷ 10) = $25** before fixed overhead. At 4 bookings: $80 − $35 − $50 = **−$5**. Two sessions, max 8 pair bookings each: 16 total. A The $35 includes materials, processing and allocated session labor; recalculate at different attendance.

## 8
### TEST + OWNER + DECISION

Within 30 days: 10 unique new paid bookings. Acquisition effort capped at $200 including valued time. At least $25 left per delivered booking under verified costs. Delivery within capacity and promise. **Owner:** the roaster. If access fails, test another route. If buyers arrive but don't buy, investigate offer, price or risk.

**Economics guardrail.** One customer = one unique paying buyer, not two attendees. The $200 includes promotional effort and valued selling time, not session delivery. Don't double-count labor. Learning arithmetic, not a forecast.

**Before a real launch.** Confirm demand, audience access, pricing, actual cost and capacity. A successful small pilot supports another test. It does not establish product-market fit.
